MMET IAC MENTOR PROGRAM
Information for Mentors

The MMET IAC Mentor Program is a service for students in which faculty and industry representatives provide guidance and support to students enrolled in the Manufacturing and Mechanical Engineering Technology Program at Texas A&M University.

This website will be improving as the MMET IAC Mentor Program develops.

Thanks you for your patience!

PURPOSE

Our purpose is to provide students with:

- Industry contacts
- Industry expectations
- Job market trends and expectations
- Help to prepare for the transition from classroom to work place.
- What do companies look for in students?
- Align with your areas of interest with jobs in industry

What does an MMET IAC Mentor do?

- MMET IAC Mentors provide guidance and support to MMET students during their undergraduate career at A&M. Mentors will be able to provide industry know-how and insight in order to help them tailor their education toward their future goals and objectives.
Why was the MMET IAC Mentor Program created?

- The MMET IAC Mentor Program was created to give MMET students early guidance about their future careers and prospective job opportunities.

Mentors can:

- Help students brainstorm ideas
- Be a sounding board for career questions
- Provide resources to explore regarding a variety of issues
- Offer advice and guidance as requested
- Encourage and nurture students as they prepare for their professional careers

If you want to participate as a Mentor, send an e-mail to mmet-mentors@entc.tamu. You will be included in the roster and will be contacted via e-mail when a student is assigned to you.

In order to measure the volume of students using this service, we request that you copy to the above mentioned address when you reply to the student for the first time.

Each mentor and student determine how often they will meet and the means they will use to communicate. Each semester, the MMET Program will provide an opportunity for mentors and students to meet at a special event.
